SESSION PLAN

Session Name	Getting Started with Python

Learning Outcomes

- Understand Python's data structures and be able to apply them.
- Know how variables work is able to manipulate them.
- Learn the use of different operators in Python.

Prerequisites for the Students ● Getting started with Python concept	

Student Activities

- What do you know about the python language?
- Overview of Getting Started with Python
    - Variables in Python
    - Data Structures in Python
    - Membership and Identity operators
- Practice problems on variables, Data Structures and Membership and Identity Operators
    - Refer the GitHub repo for problems
- Quiz on getting started with python.
- Questions and Discussion on doubts - AMA
- Code Along (refer the GitHub repo)

Next Session

- Concept - Handling Problem Flow with Python
- Key topics to be highlighted - highlight where they would need to spend more time and importance w.r.t Data Science.
    - Conditional Statements
    - Exception handling
    - The file I/O
    - Classes in Python
- Understanding the object-oriented programming paradigm would be a little bit challenging for non-programmers. Alert them to not get overwhelmed.
